## 1 Overview

ADL200 single phase electric meter is designed for single phase active energy measurement on low voltage system, in the same time it can measure the electrical parameters like voltage, current, power and so on. There is also RS485 can be chosen. This electricity meter has advantages of smaller volume, high precision, good EMC, easily installing etc, All meters meet the related technical requirements of electricity meter in the IEC62053-21, IEC62053-22 standards.

### 2 Function

| Function                                   | Function description   | Function<br>provide |
|--|--|---------------------|
| Measurement<br>of kWh                      | Single-phase active kWh (positive and negative), 3 months historical energy data frozen storage    | •                   |
| Measurement<br>of electrical<br>parameters | Voltage, Current, Active power, Reactive power, Apparent power,<br>Power factor and Frequency      | •                   |
| LCD Display                                | 8 bits section LCD display   |                     |
| Key<br>programming                         | 3 keys to set parameters like code, address, baud rate, multi-tariff<br>and communication protocol |                     |
| Pulse output                               | Active energy pulse output   |                     |
| Multi-tariff                               | Adapt 4 time zones, 2 time interval lists, 14 time interval by day<br>and 4 tariff rates           | ΠF                  |
| Communication                              | Communication interface: RS485, Communication protocol: MODBUS-RTU                                 | ■C                  |

( $\blacksquare$ : Standard;  $\Box$ : Optional)

# 3 Technical parameter

### 3.1 Electric performance

| Ionnance       |                      |                                  |
|----------------|----------------------|----------------------------------|
|                | Reference<br>voltage | AC 220V                          |
| T              | Reference            | 50Hz                             |
| Input voltage  | frequency            |                                  |
|                | Power                | <10VA                            |
|                | consumption          |                                  |
|                | Basic current        | 10A                              |

|                | Width  | × |                |
|                | Height |   |                |
| Strong current | <1.8Nm |   |                |
| terminal       |        |   |                |
| Torque         |        |   |                |

#### 3. 3 Work environment

|                   | Work        | -25°C~55°C                  |
|-------------------|-------------|-----------------------------|
| Temperature       | temperature |                             |
| range             | Storage     | -40°C~70°C                  |
|                   | Temperature |                             |
| Relative humidity |             | $\leq$ 95%(No condensation) |
| Altitude          |             | <2000m                      |

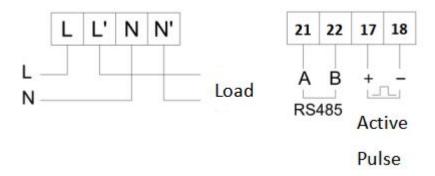

#### 4 **Outline (unit: mm)**

Meter outlook and size

5 wiring and installing

#### 6 Diagnosis, analysis and elimination of common faults

#### 6.1 Auxiliary power failure

Failure performance: the meter flashes and does not light up after being powered on.

**Troubleshooting:** 1. Check whether the wiring of the auxiliary power supply is consistent with the wiring diagram of the instrument, and whether the wiring is loose or falling off;

2. Use a multimeter to measure whether the input voltage value of the auxiliary power supply is within the normal working voltage range of the instrument.

6.2 Signal input failure

Failure performance: After the meter is powered on, the display power or energy count is not accurate.

Troubleshooting: Switch the display interface of the meter to the power (active P, power factor  $\lambda$ ) interface, check whether the power display is negative and whether the power factor is between 0.9-0.95, and then check whether the input and output of the current signal line are reversed (That is, the incoming line of the current must be consistent with the incoming end of the instrument), And consistent with the wiring on the meter.

6.3 communication failure

Failure performance: After the meter is powered on, it cannot communicate with the host computer normally.

**Troubleshooting:** 1. The voltage value between the communication output A and B of the measuring instrument should be between +(4.4-4.5)V;

2. Check whether the communication wiring method is correctly wired according to the wiring diagram (that is, the communication terminal A/B of the instrument should correspond to the communication serial port A/B);

#### 7 Operation and display

#### Key icon Key name Key function View voltage and current in the view interface Key up Up and flashing shift in the programming interface View power in the view interface Scroll down and modify flashing Key down bits in the programming interface View electrical energy in the viewing interface Long press 3S to enter/exit the Key setting menu Short press OK in the programming interface to save the settings

#### 7.1 Key description

#### 7.2 display description

Show total energy when connected. Change information while pressing down key. Display information as following:

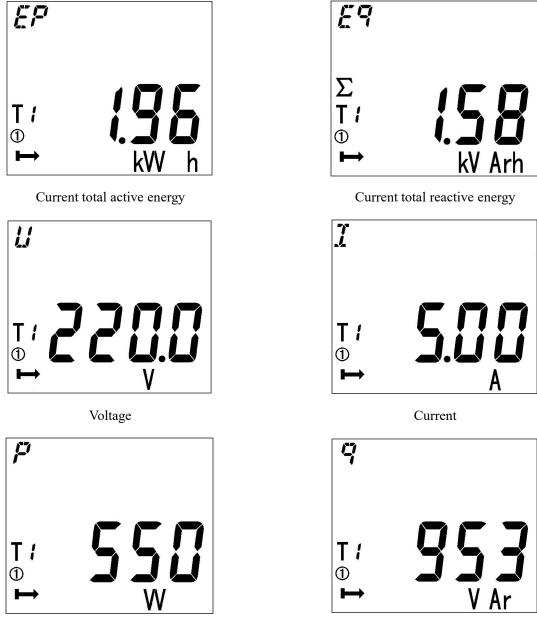

|        | U, I, F, Time, MODBUS Address, Baud, parity, Version, ALL-display;                   |
|--------|--|
| ×      | Total active power, total reactive power, total apparent power, total power factor;  |
| ₹<br>₽ | Total active energy, forward active total energy, reverse active total energy, total |

| active spike energy, total active peak energy, total active flat energy, total active |  |  |  |  |  |
|---|--|--|--|--|--|
| valley energy, total reactive energy, forward reactive total energy, reverse total    |  |  |  |  |  |
| reactive energy, total reactive spike energy, total reactive peak energy, total       |  |  |  |  |  |
| reactive flat energy, total reactive valley energy.                                   |  |  |  |  |  |

Note:

1. Listed above are the names of all display interfaces of the ADL200 meter with double rate function. Three buttons can switch different types of display content, the switching sequence is as described above;

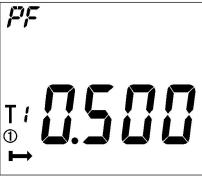

2. For the ADL200 meter without the double rate function, it does not display the date, time and various types of time-sharing energy (the energy in the four rate periods of sharp, peak, flat and valley).

Current total reactive power 953VAr

Current total active power 550W

| 5                    |          |                       | <i>₽</i> , <b>₽</b> , <b>₽</b> |
|----------------------|----------|-----------------------|--------------------------------|
| <b>⊺</b> ;<br>①<br>➡ | <br> .   | kV A                  |                                |
| Comment              | tatal an | parent nower 1 100kVA | Current total                  |

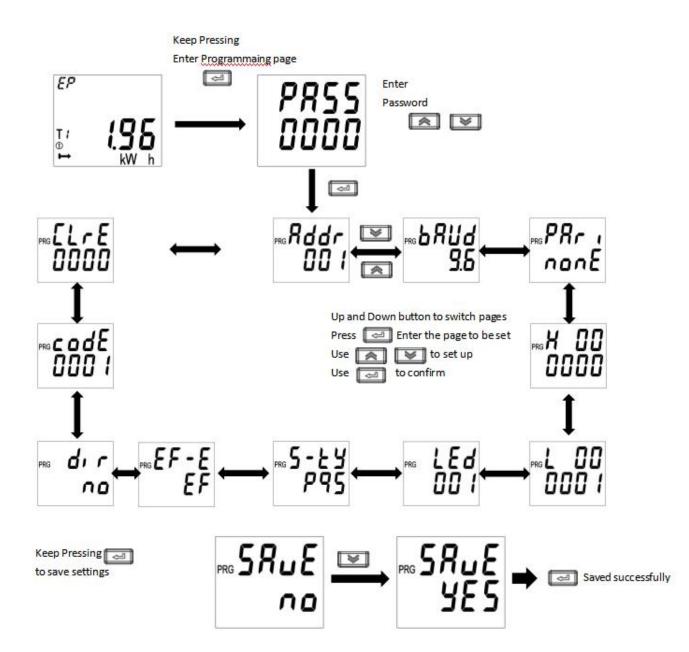

Current total apparent power 1.100kVA

Current total power factor 0.500

Note: The above is just a part of the display interface. The display mode of other interfaces is similar to the above figure. You can judge the display meaning according to the information displayed on the interface.

7.3Programming display menu

| Press at any main menu and get in  | PRSS    | interfa  | ce, and then press  | show                | р.<br>1000 , | and enter  |
|--|---------|----------|---------------------|---------------------|--------------|------------|
| the code. If you enter a wrong code, it will show "00  | 000" ai | nd enter | the code again; and | l if you enter a ri | ght code     | e, you can |
| set the parameter. After setting the parameter, it will without save by pressing <u>no</u> . | l show  | SRuE     | and save the char   | nge by pressing     | 5.<br>YES    | and quit   |

7.4 Item can be set

## 8 Communication description

#### 8.1 Communication protocol

The meters adapt Modbus . Please refer to the relevant standards for more information. The multi-tariff data mean nothing when multi-tariff function (F) is not applied.

## 8.2 MODBUS Address list

| DBUS Ad<br>Address | Variable                              | Longth | Attribut | Note   |
|--------------------|---------------------------------------|--------|----------|--|
| Address            | Variable                              | Length | es       | INOLE  |
| 0000H              | Current combined total active energy  | 4      | R        |  |
| 0002H              | Current combined spike active energy  | 4      | R        |  |
| 0004H              | Current combined peak active energy   | 4      | R        | unit: 0.01kWh  |
| 0006H              | Current combined flat active energy   | 4      | R        |  |
| 0008H              | Current combined valley active energy | 4      | R        |  |
| 000AH              | Code                                  | 2      | R        |  |
